## U.S.E.P.A. DEFINED DATA QUALIFIERS

<u>QUALIFIER</u>	<u>DEFINITION ORGANICS</u>	<u>DEFINITION INORGANICS</u>
• U	Compound was tested for but not detected. The sample quantitation limit must be corrected for dilution and for percent moisture. For soil samples subjected to GPC clean-up procedures, the CRQL is also multiplied by two, to account for the fact that only half of the extract is recovered.	Analyte was analyzed for but not detected.
• J	Estimated value. Used when estimating a concentration for tentatively identified compounds (TICs) where a 1:1 response is assumed or when the mass spectral data indicate the presence of a compound that meets the identification criteria and the result is less than the sample quantitation limit but greater than zero. Used in data validation when the quality control data indicate that a value may not be accurate.	Estimated value. Used in data validation when the quality control data indicate that a value may not be accurate.
• C	This flag applies to pesticide results where the identification is confirmed by GC/MS.	Method qualifier indicates analysis by the Manual Spectrophotometric method.
• B	Analyte was found in the associated blank as well as in the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action	The reported value is less than the CRDL but greater than the instrument detection limit (IDL).
• D	Identifies all compounds identified in an analysis at a secondary dilution factor. If a sample or extract is re-analyzed at a higher dilution factor as in the "E" flag above, the "DL" suffix is appended to the sample number on the Form I for the diluted sample, and <u>all</u> concentration values are flagged with the "D" flag.	not used

<u>QUALIFIER</u>	<u>DEFINITION ORGANICS</u>	<u>DEFINITION INORGANICS</u>
• E	Identifies compounds whose concentrations exceed the calibration range for that specific analysis. All extracts containing compounds exceeding the calibration range must be diluted and analyzed again. If the dilution of the extract causes any compounds identified in the first analysis to be below the calibration range in the second analysis, then the results of both analyses must be reported on separate Forms I. The Form I for the diluted sample must have the "DL" suffix appended to the sample number.	The reported value is estimated because of the presence of interference
• A	This flag indicates that a TIC is a suspected aldol concentration product formed by the reaction of the solvents used to process the sample in the laboratory.	Method qualifier indicates analysis by Flame Atomic Absorption (AA).
• M	not used	Duplicate injection (a QC parameter) not met.
• N	not used	Spiked sample (a QC parameter) recovery not within control limits.
• S	not used	The reported value was determined by the Method of Standard Additions (MSA).
• W	not used	Post digestion spike for Furnace AA analysis (a QC parameter) is out of control limits of 85% to 115% recovery, while sample absorbance is less than 50% of spike absorbance.
• *	not used	Duplicate analysis (a QC parameter) not within control limits.
• +	not used	Correlation coefficient for MSA (a QC parameter) is less than 0.995.

7

QUALIFIER    DEFINITION ORGANICSDEFINITION INORGANICS

- P              not used
  - CV             not used
  - AV             not used
  - AS             not used
  - T              not used
  - NR             The analyte was not required to be analyzed.
  - R              Rejected data. The QC parameters indicate that the data is not usable for any purpose.
- Method qualifier indicates analysis by ICP (Inductively Coupled Plasma) Spectroscopy.
- Method qualifier indicates analysis by Cold Vapor AA.
- Method qualifier indicates analysis by Automated Cold Vapor AA
- Method qualifier indicates analysis by Semi-Automated Cold Spectrophotometry.
- Method qualifier indicates Titrimetric analysis.
- The analyte was not required to be analyzed.
- Rejected data. The QC parameters indicate that the data is not usable for any purpose.

TO: Tim Murphy  
FROM: Ron Turpin & Jim Shaw *Bob State for Jim Shaw*  
SUBJECT: Review of Data Package  
Sauget Sites Area #1

The Division of Laboratories Quality Assurance Section has reviewed the above referenced data package. The package was for 5 water samples, 13 soil samples and 1 trip blank sample taken on March 28, 1991, for the target compound list. The samples were analyzed at the IEPA laboratories in Springfield (organics) and in Champaign (inorganics). The results are valid as qualified on the attached Forms 1.

After receiving a specimen, it should be stored from the time of receipt, whenever possible, in its original container and seal intact and refrigerated until the time of testing. After testing, the specimen should be discarded. Specimens sent by mail should be packed securely and will be handled with care.

Volatile data :

Acetone was out of the instrument calibration range for the low run of X103 but below the detection limit for the medium run. *CC*

Semivolatile data :

Two TIC compound names in G205 were too long for the form. See the raw data for the complete names. *CC*

Pesticide data :

Both pesticides and overlapping PCBs were detected in some samples. PCBs were calculated on the basis of peaks relatively unique that PCB, and pesticides were calculated after the height due to aroclors was subtracted. *CMC*

Were ICP interelement corrections applied? Yes —

Were ICP background corrections applied? Yes —

If yes, were raw data generated before application of background corrections? No —

Comments: —Digestion for ICP and furnace metals was done by microwave digestion with 1.0 ML of 1:1 HCL added. Second CCV failed on aluminum and iron. Did not catch until after the fact.—

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.
